

INVEST

The INVEST acronym (Wake, 2003) commonly used in the agile environment. Provides a quality check used to evaluate and improve user stories and other product backlog items. INVEST represents a set of quality attributes of a user story.

Independent

- Not dependent on other requirements/user stories but should be singular so that they can be developed alone.

Negotiable

- A placeholder for further discussion to establish the business need and how it can be fulfilled.

Valuable

- Delivering something of value to the customer or improving customer experience.

Estimatable

- Can be estimated (usually in story points).

Small

- Small enough to deliver within a sprint.

Testable

- Underpinned by acceptance criteria and capable of being tested once fulfilled.
